

E - COMPONENTS & CHAINS

The Detectamet SK104 safety knife is a lightweight disposable safety cutter .Designed for use by both left and right handers. Featuring a sealed handle with a 14mm blade extension and a non changeable stainless steel blade it incorporates an automatic blade retraction on release of the slider. Its main uses include the cutting of most light weight materials i.e. card/carton board, shrink wrap, nylon pallet strapping, string, paper, plastic wrapping and other such materials

Detectamet SK104 Safety Knife

Operating instructions for automatic blade retraction

1. Push the slider button to expose the blade ready for cutting
2. Insert the blade into the material to be cut
3. Important! In carton board and similar materials the blade will remain out, and the thumb should be removed from the slider button for the duration of the cutting operation.
4. The blade will automatically and instantaneously retract into the body of the knife when the blade leaves contact with the material and the cutting stroke is complete
5. When cutting lighter weight materials such as paper, plastic bags & shrink wrap etc, the slider button must be held manually with the blade out

Maintenance

(Do not attempt to poke objects into the blade openings)

1. Check the blade regularly for debris or tape residue etc
2. Check that the slider is working correctly and is clear of any debris
3. Do not attempt to make unauthorised repairs and report any damage or defects to the appropriate person
4. Dispose of used knives in accordance with company procedures
